

BONA PARKETT CLEANER

Sitework

Surface preparation

Remove dust/grit etc using a vacuum cleaner, scissor mop or other dry cleaning method.

Application

Assess the condition of the floor and dilute the Parkett Cleaner as required (for normal cleaning 50 ml / 10 litres of water, for very dirty floors 100 ml / 10 litres of water).

On large floors, machine cleaning using either a scrubber/drier or a spray buff system is the most suitable method. Smaller floors may be cleaned using a mop or well wrung-out cloth.

N.B. It is important that the amount of water used to clean the floor is kept to a minimum.
